Ministry of Trade, Republic of Tarvos - Notice 2026/14 on the Export Licensing of Tarvonite

FICTIONAL TEST DOCUMENT - invented for software testing. Not real events, people or data.

Article 1 - Scope. With effect from 1 January 2027, all exports of tarvonite concentrate and of tarvonite-derived magnet alloys require an individual export licence issued by the Ministry of Trade.

Article 2 - Application. Licence applications must declare the end user, the intended end use and the destination country. The Ministry may refuse or delay an application where the end use is judged to affect national security or domestic industrial strategy.

Article 3 - Processing time. The statutory processing period for an export licence is up to 45 working days. During the pilot phase in 2026, the average processing time was 38 working days.

Ministry of Trade, Republic of Tarvos - Notice 2026/14 on the Export Licensing of Tarvonite

FICTIONAL TEST DOCUMENT - invented for software testing. Not real events, people or data.

Article 4 - Validity. Licences are valid for six months and are issued for a fixed volume. Unused volume lapses at expiry and cannot be carried over to a new licence.

Article 5 - Domestic priority. A domestic processing quota is introduced: at least 30 percent of annual tarvonite concentrate output must be offered first to domestic magnet manufacturers before export licences are granted.

Article 6 - Transparency. The Ministry will publish a quarterly list of the end users that have received export licences, together with the licensed destination country.

Article 7 - Enforcement. Exporters must keep records for seven years and allow inspections. Exporters who ship to a destination other than the declared one lose licensing privileges for five years.
